

SpineXR- VQA (Example)

Open-ended Six Categories of QA pairs

Abnormality

- ? What is the nature of the abnormality observed in the X-ray image?
- ✓ The X-ray image shows a disc space narrowing at the C5-C6 and C6-C7 levels, indicating a degenerative change in the intervertebral discs.

Severity

- ? What is the severity of the disc space narrowing observed in the X-ray image?
- ✓ The disc space narrowing appears to be moderate, with a noticeable reduction in the height of the intervertebral discs at the affected levels.

Location

- ? Where are the disc space narrowing observed in the X-ray image?
- ✓ The disc space narrowing is observed at the C5-C6 and C6-C7 levels, which are located in the cervical spine

Diagnostic

- ? What is the most likely diagnosis based on the X-ray image?
- ✓ The most likely diagnosis is degenerative disc disease, which is characterized by the progressive deterioration of the intervertebral discs.

Reasoning

- ? What are the possible causes of the disc space narrowing observed in the X-ray image?
- ✓ The possible causes of the disc space narrowing include age-related wear and tear, trauma, or underlying medical conditions such as osteoarthritis..

Treatment

- ? What are the suggested treatment or management options for the detected abnormalities?
- ✓ The suggested treatment or management options for the detected abnormalities include conservative management, such as cord and nerves. A thorough evaluation by a healthcare professional is necessary to determine the best course of treatment.
